16. ABSTRACT

This report provides data on the use of sanitary landfills (Subtitle D facilities) for hazardous waste disposal in Florida by small quantity generators. It consists of eleven parts including a part called Study Area Data which contains the data aggregated across the counties covered in the report, and ten parts containing data at the individual county level for all 67 counties in Florida. Each county is described in terms of location, economic profile, and demographic characteristics. In addition, information is provided on permitted sanitary landfills that are currently active in Florida. This report contains survey data from approximately 19,000 hazardous waste generators that reside in 514 industries identified by four-digit Standard Industrial Classifications codes. The hazardous waste data are cross-tabulated and displayed in the following seven configurations: types of waste generated (26 types); management methods used (14 methods); types of wastes disposed in sanitary landfills; SIC generating waste; types of waste generated by SIC; management methods used by SIC; and waste types by SIC by management method. The last cross-tabulation consists of 14 sub cross-tabulations, i.e., one for each management method. There are identical sets of crosscounty data (i.e., each county has a set of 7 cross-tabulated tables.)

The information in this document has been funded wholly or in part by the U.S. Environmental Protection Agency under Grant No. CR-813151010 to the Florida State University. It has been subject to the Agency's peer and administrative review and it has been approved for publication as an EPA document. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

FOREWORD

This research was conducted in order to provide information to the U.S. Environmental Protection Agency that relates to the use of RCRA Subtitle D facilities by small quantity generators of hazardous waste. One area of concern that relates to RCRA Subtitle D facilities is the effectiveness of monitoring programs at these facilities. An important component in assessing monitoring programs at RCRA Subtitle D facilities is the data on the composition of wastes managed at these facilities. The purpose of this report is to provide to the EPA data on small quantity generator hazardous waste that is managed at RCRA Subtitle D facilities in the State of Florida, with a particular emphasis on sanitary landfills.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for those counties included in each of the first ten parts of the report. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The specific counties that are included in Parts I-X of the report are the following:

Part I: Alachua, Baker, Bay, Bradford, Brevard

Part II: Broward, Calhoun, Charlotte, Citrus, Clay, Collier

Part III: Columbia, Dade, De Soto, Dixie, Duval

Part IV: Escambia, Flagler, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Hernando, Highlands

Part V: Hillsborough, Holmes, Indian River, Jackson, Jefferson, Lafayette

Part VI: Lake, Lee, Leon, Levy, Liberty, Madison, Manatee, Marion

Part VII: Martin, Monroe, Nassau, Okaloosa, Okeechobee, Orange

Part VIII: Osceola, Palm Beach, Pasco, Pinellas

Part IX: Polk, Putnam, St. Johns, St. Lucie, Santa Rosa, Sarasota, Seminole

Part X: Sumter, Suwanee, Taylor, Union, Volusia, Wakulla, Walton, Washington

ABSTRACT

This report contains data from all of the 67 counties in the State of Florida, and from over 19,000 small quantity hazardous waste generators. Most of the firms and agencies providing hazardous waste data included in this report are small quantity hazardous waste generators as defined in the RCRA regulations. These data are displayed according to 26 waste types, 14 waste management methods and 514 industries as defined by four-digit Standard Industrial Classification codes. This report contains individual county data for each of the 67 counties in the State of Florida summarized and presented by these waste types, waste management methods, and Standard Industrial Classification codes. This report also contains statewide data aggregated across all of the 67 counties in the State of Florida by these waste types, waste management methods, and Standard Industrial Classification codes.

These data indicate that there are approximately 129,000 tons of small quantity generator hazardous waste produced annually in the State of Florida. Approximately 35 percent of these wastes are recycled, while approximately 23 percent of these wastes are disposed in sanitary landfills in the State of Florida.

In terms of weight, the major types of waste disposed in sanitary landfills are "Waste Oils, Lubricants" (45 percent), "Lead-Acid Batteries" (12 percent), "Spent Solvents" (11 percent), and "Sludges with Heavy Metals" (5 percent). Even though waste oils are not regulated as a hazardous waste under the RCRA, they were included in the county-level surveys conducted in the State of Florida.

Counties in the State of Florida are relatively diverse in terms of geography, population size and growth, and economic activities. As such, these Florida data on small quantity generator hazardous waste are generally representative of the types and quantities of these wastes produced, and the management practices used, nationwide by small quantity hazardous waste generators.

SECTION 1

INTRODUCTION

The 1984 Hazardous and Solid Waste Amendments to RCRA require the U.S. Environmental Protection Agency (EPA) to complete a study of the adequacy of the current Subtitle D programs in the States and to report to Congress within 36 months of enactment of the amendments. The study is to evaluate the current criteria regarding protection of public health and the environment from problems associated with groundwater contamination. The study is to include a detailed assessment of the adequacy of groundwater monitoring programs at Subtitle D facilities, as well as a recommendation to Congress concerning what enforcement authorities are needed to properly implement the program.

After completion of this study, the EPA is to revise, where necessary, the criteria for facilities that receive household and small quantity generator hazardous waste. The revisions are to include all steps necessary to protect human health and the environment. The amendments specify that, at a minimum, the revisions should require groundwater monitoring as necessary to detect contamination. Information on the types and quantities of hazardous waste typically entering the Subtitle D facilities is important in order to properly design monitoring systems to detect contamination. The 1984 RCRA amendments require the states to adopt and implement Subtitle D permitting programs that are to be approved by the EPA, or that are equivalent or similar to the federal program as defined by current or revised criteria.

An important component in assessing groundwater monitoring programs at Subtitle D facilities is the acquisition of data on the composition of wastes managed at these facilities. The purpose of this report is to provide the EPA with data on potentially hazardous waste generated and managed in the State of Florida, as well as with information on sanitary landfills in Florida. The sanitary landfills described in the study are those that reside in the counties that have provided the hazardous waste generation and management data.

This report consists of eleven parts. Parts I-X of the report are called County Data and contain individual county data for all 67 counties in the State of Florida and, as a result, cover the hazardous waste management activities of small quantity generators for the entire State of Florida. Part XI of the report is called Study Area Data and it contains data aggregated across all of the 67 counties in the State of Florida. Each county is described in terms of location, economic profile, and demographic characteristics. The counties are listed in alphabetical sequence within each of the first ten parts of the report. The specific counties that are included in each part of the county data (Parts I-X) are specified in the Foreword (p. iii).

SECTION 2

METHODOLOGY AND STUDY AREA

METHODOLOGY

The data contained in this report on hazardous waste generation and management, and sanitary landfills were acquired from the Florida Department of Environmental Regulation (FDER). The hazardous waste data were collected as part of a statewide local government hazardous waste assessment program administered by the FDER. These data have been compiled to assist the EPA in evaluating facilities (sanitary landfills) regulated under Subtitle D of the RCRA so that appropriate groundwater monitoring programs can be established at these facilities. The data contained in this report will assist the EPA in defining the problems associated with hazardous waste disposal in sanitary landfills and with other management methods used by small quantity generators of hazardous waste. In addition, these data can provide information that the agency can use in determining the regulatory status of waste oil in the context of the RCRA concerns.

The data are presented in tabular form by amount, type, waste management method, and Standard Industrial Classification (SIC) code. Waste amounts are in units of pounds for the county data (Parts I-X) and in units of tons for the study area aggregated data (Part XI). There are (26) waste types and (14) waste management methods into which the data are arranged. In addition, there are 514 four-digit Standard Industrial Classification codes into which the data have been cross-tabulated and arranged.

It should be noted that an initial list of approximately 400 SIC codes was prepared by the FDER, and this list was used by the counties in identifying potential generators of hazardous waste. The number of SIC codes for which data are presented in this report reflects the SIC codes actually reported by the potential generators responding to the survey. Some survey respondents, for example, changed the SIC code on the survey form sent to them, to an SIC code that more closely reflected the primary activity of the firm as judged by the respondent. The changing of SIC codes by survey respondents resulted in SIC codes that are not on the initial FDER list, but are, nevertheless, contained in this report. As a result, the total number of SIC codes for which data are presented in this report is 514.

The county level data were provided by the FDER and merged into a single data file for computer manipulation. Due to the decentralized way that the data were collected, keypunched, and coded, some deficiencies exist in the data and should be noted. First, Bay, Broward, Dade, Escambia, Monroe, Okaloosa, Santa Rosa, and Walton counties utilized a waste management category called "Picked Up by a Private Hauler." When these data were processed by the counties, they were coded into the category "City, County, or Private Hauler Takes Waste to the Landfill." Although unknown, it may be that some of these wastes were recycled or managed in ways other than disposal in sanitary landfills. A significant amount of these wastes are waste oils, lead-acid batteries, spent solvents, and empty pesticide containers. This coding procedure over-estimates the amount of waste managed at sanitary landfills in these counties.

Second, De Soto, Hardee, Highlands, Okeechobee, and Polk counties also utilized a waste management category on their survey form called "Picked Up by a Private Hauler." However, in this case, these counties did not specify where this material was taken for ultimate management, whereas, in the previous case, it was assumed that all waste that was reported picked up by a private hauler was, in turn, taken to a sanitary landfill. Wastes reported managed in this category for these counties have been consolidated into the waste management category "Other" in this report. Much of the wastes reported managed by this method are wastes that typically have secondary market value (e.g., waste oils, lead-acid batteries, spent solvents, and empty pesticide containers). It is likely that some of these waste were ultimately recycled. It is not possible to determine the ultimate management fate of wastes reported in this category on the survey forms. The use of the category "Picked Up by a Private Hauler" under-estimates the amounts and types of waste managed at sanitary landfills for these counties.

Upon examining the data in terms of the waste types generated by Standard Industrial Classification (SIC) codes, some anomalies have been identified. These anomalies relate to the reported generation of, for example, dry cleaning filters, waste explosives, and photographic wastes by industries that typically would not generate these types of wastes (e.g., Plumbing, Heating and Electrical Establishments, Gasoline Service Stations, Boat Building and Repair Shops, Trucking Companies, General Automotive Repair Shops, Reupholstery and Furniture Repair Shops, Motor Vehicle Dealers and Automobile and Home Supply Stores). The presence of these anomalies in the data does not significantly affect the overall distributions of waste types generated or waste management methods reported used by generators participating in the assessments. As with any large, decentralized data base, it is anticipated that errors relating to respondent accuracy, coding and keypunching have occurred.

The data relating to sanitary landfills in the study area were obtained from the FDER. The FDER maintains a data file on all sanitary landfills in the State of Florida. The data in the FDER file are for all classes of landfills, and for landfills that are closed, inactive, or active. The data presented in this report are only for landfills that are in use (i.e., permit status: active) and of Class I, II, or III.

Sanitary landfill facility classes are defined by the FDER as follows:

Class I Landfill	Landfill receiving some putrescible waste or garbage with total disposal in excess of 20 tons or 50 cubic yards (compacted) per day. Daily cover is required.
Class II Landfill	Landfill receiving some putrescible waste or garbage with total disposal of less than 20 tons or 50 cubic yards per day. Minimum cover is once every four days.

Class III Landfill	Landfill receiving only non-putrescible waste (i.e., trash, demolition and construction debris, yard trash, etc.). Minimum cover requirement is once per week.

The data file maintained by the FDER consists primarily of information contained in the facility permit, as well as a historical log of permit activities, including operational deficiencies at the facility. Printouts of each of the 160 active sanitary landfills that are in the 67 counties in the State of Florida are contained in Appendix D of Part XI of the report (Study Area Data), and definitions of the facility profile codes used in the FDER printouts are contained in Appendix E of Part XI of the report (Study Area Data).

In the appendices of Parts I-X of the report (County Data), there are displays that contain 21 summary characteristics for each active sanitary landfill in the State of Florida. These summary characteristics have been extracted from the facility printouts contained in Appendix D of the Study Area Data.

STUDY AREA

The study area for this report is the entire State of Florida including all 67 counties and is shown in Figure 1. Florida counties are diverse in terms of population, location, and economic profile. These counties consist of: highly populated, urban areas; areas with relatively low population or rural areas; coastal and non-coastal areas; relatively industrialized areas with varied manufacturing activities; and, areas that are relatively non-industrialized. In the appendices of Parts I-X of the report (County Data), each county is briefly described in terms of location, population, and economic activities occurring in the county.

SECTION 3

HAZARDOUS WASTE GENERATOR DATA AND CHARACTERISTICS OF SANITARY LANDFILLS

HAZARDOUS WASTE GENERATOR DATA

The hazardous waste generator data for the counties included in this part of the report are presented in the Appendices of this part. These data provide information on the hazardous waste generation and management practices of smaller hazardous waste generators in these counties, particularly as they relate to the use of sanitary landfills for disposal of these wastes.

The county hazardous waste data included in this report are presented in the following displays:

- Types and Amounts of Hazardous Waste Generated Annually;
- Hazardous Waste Management Practices;
- Hazardous Waste Disposed in Sanitary Landfills Annually;
- Hazardous Waste Generated by Standard Industrial Classification Code;
- Hazardous Waste Types Generated by Standard Industrial Classification Code;
- Hazardous Waste Management Methods Used by Standard Industrial Classification Code; and
- Hazardous Waste Types Generated by Standard Industrial Classification Code by Management Method.

All hazardous waste data included in the report were collected as survey data under the Florida Local Government Hazardous Waste Assessment Program. A major goal of the Florida Local Government Hazardous Waste Assessment Program is to address the problems associated with hazardous waste mismanagement, particularly as this mismanagement relates to smaller quantity generators. This program requires all counties in the State of Florida to conduct assessments of hazardous waste related activities in their jurisdictions using guidelines developed by the Florida Department of Environmental Regulation (FDER). One component of the county assessments consists of a survey of hazardous waste generators. Generators in each county were identified using a list of approximately 400 Standard Industrial Classification (SIC) codes. This SIC list was assembled initially by the EPA Office of Solid Waste for use in its national survey of small quantity generators. The EPA list was subsequently expanded to include firms that are of particular significance to the State of Florida (e.g., Boat Building and Repair), as well as to include those firms that are involved with the production or use of waste oil. Although waste oils are not regulated as a hazardous waste under the RCRA, waste oils were included in the State of Florida surveys.

The survey data were collected utilizing questionnaires sent through the mail and on-site interviews. All county data were intended to be made available to the FDER in a predetermined format so that the data could be merged into regional assessments, as well as a statewide assessment of hazardous waste generation and management practices.

All counties in the State of Florida received funding from the state to complete the surveys. The funding received by the counties was based upon population. The surveys were conducted under a variety of agreements involving county governments, regional planning agencies, private consultants, and combinations of these entities. For example, some counties conducted their own surveys while utilizing a consultant to process the data, while some of the larger counties completed all aspects of the survey in-house. The result was the collection of data through a number of individual but coordinated efforts.

The waste generation and management data consist primarily of responses from small quantity hazardous waste generators. However, some of the county data are not separated by large quantity generator data and by small quantity generator data. Overall, the portion of large quantity generator waste in these data is not significant.

CHARACTERISTICS OF SANITARY LANDFILLS IN THE STATE OF FLORIDA

This report contains information on sanitary landfills that are receiving potentially hazardous wastes. The characteristics of these sanitary landfills were obtained from the FDER. These data have been extracted from the facility permits and are maintained by the FDER in a facility data file (data file: GMS 25). Individual facility printouts for all active sanitary landfills in the State of Florida are contained in Appendix D of this part of the report (Part XI). Corresponding landfill characteristics for the 160 individual active sanitary landfills in the State of Florida are contained within the appendices of Parts I-X (County Data) of the report. The sanitary landfill information is summarized and displayed in tabular form, and is constructed from a list of twenty-one characteristics. These sanitary landfill characteristics are:

- Class of Landfill
- Responsible Authority
- Design Capacity
- Population Served
- Disposal Method
- Waste Types Accepted
- Land Owner
- Disposal Acreage
- Waste per Day Accepted
- Total Acreage
- Landfill Type
- Years in Operation
- Gas Control Used
- Cell Depth
- Depth to Water Table
- Soil Permeability
- Liner Material
- Number of Monitoring Wells
- Approved GW Monitoring Plan
- Adjacent Land Use
- Number of Surface Monitoring Points

APPENDIX A:

Escambia County

ESCAMBIA COUNTY

Escambia County, shown in the following figure, is located in the western-most county on Florida's northern panhandle and is comprised of 661 square miles. The 1970 population in Escambia County was 205,334, which rose to 250,134 in 1983. The estimated 1990 population in Escambia County is 276,800. Escambia County is the ninth most densely populated county in the state with 378 persons per square mile. The city of Pensacola is the county's largest metropolitan area with a 1983 population of 59,563.

Total employment in Escambia County is 87,801. The Services sector represents 30 percent of that total. Retail Trade is the second largest employment sector (21%), Government employment is third (13%), and Manufacturing is the fourth largest sector with 12 percent of the total. The Construction employment sector accounts for 7 percent of the total employed. Other categories, including Agriculture, Mining, Transportation, Communication, Public Utilities, Wholesale Trade and Finance, Insurance, and Real Estate, each contribute 6 percent or less to total employment.

There are three active landfills in Escambia County: the Perdido Sanitary Landfill, a Class I landfill; the Camp Five Sanitary Landfill, a Class II landfill; and the Mobile Highway Sanitary Landfill, a Class III landfill. At the Perdido Sanitary Landfill the trench method is used, and at the Camp Five Sanitary Landfill, which is comprised of an old clay borrow pit, the area method is employed. According to a study conducted by the Northwest Florida Water Management District, the Perdido Sanitary Landfill has lateral drainage and the leachate collection system is ineffective. High levels of Pb have been detected. Of the ten monitoring wells reported for the Perdido Sanitary Landfill, the Northwest Florida Water Management District indicated that only seven were reported to be "adequate." At the Class II Camp Five Sanitary Landfill, the soil liner may not be adequate to keep leachate from draining into the water table and into streams to the south and southwest of the facility. Relatively high levels of Zn, Pb, Cu, Fe, Ni, Cr, Mn, and Cd have been detected at this site according to groundwater monitoring records. There is only one monitoring well at the Camp Five Sanitary Landfill and this well is believed to be inadequate. There is little information available on the Class III Mobile Highway Sanitary Landfill.

APPENDIX B:

Flagler County

FLAGLER COUNTY

Flagler County, shown in the following figure, is located in northeastern Florida along the Atlantic coastline. The area of Flagler County is approximately 505 square miles. Flagler is primarily a tourist-related county, but contains a variety of economic activities. The population of Flagler County in 1970 was 4,450, while in 1980 it was approaching 11,000 persons. In 1990, the population is estimated to be about 21,000. The major employment sectors in Flagler County are Services (35%), Retail Trade (18%), Finance, Insurance, and Real Estate (14%), and Manufacturing (11%). All other sectors contribute 5 percent or less of total employment in the county.

In Flagler County there are two active landfills, the Flagler County Sanitary Landfill (Class I) and the Flagler County Landfill (Class III). At the Flagler County Sanitary Landfill, waste is placed within 5 feet of groundwater and a perimeter ditch and oxidation pond discharge directly into a nearby creek. There is no NPDES permit for this facility nor has a groundwater monitoring plan been approved by the FDER.

APPENDIX C:

Franklin County

FRANKLIN COUNTY

Franklin County, shown in the following figure, is located in the northwestern portion of the state along the coast of the Gulf of Mexico. Franklin County is approximately 565 square miles in area. It is predominantly a rural county with seafood production as its main economic activity. In 1970, the population of Franklin County was 7,100 and in 1983 the population was 7,900. In 1990 the population of Franklin County is projected to increase to about 8,200. Franklin County is situated at the mouth of the Apalachicola River, which is an estuary contributing to the productivity of the Apalachicola Bay.

It should be noted that fishing or seafood production is the main employment sector in Franklin County, however, most fishermen are seasonally self-employed and as a result employment data are not typically collected on this activity. In terms of reported employment data, the largest employment sector in Franklin County is Services, contributing about 34 percent of all jobs in the county, while Retail Trade contributes about 21 percent of all jobs in the county. The Government sector contributes about 14 percent of total employment in the county. The remaining jobs are contributed by all other sectors, including Agriculture, Mining, Wholesale Trade, and Finance, Insurance, and Real Estate.

There is one active landfill in Franklin County called the Franklin County Sanitary Landfill, a Class I facility. The Franklin County Sanitary Landfill began operating in 1978, and has approximately 4 remaining years of capacity. The facility is unlined and has eleven groundwater monitoring wells and three surface water monitoring points. The average cell depth is reported to be six feet, and the depth to the water table is approximately two feet. The soil permeability at the site is approximately 20 inches per hour.

APPENDIX D:

Gadsden County

GADSDEN COUNTY

Gadsden County, shown in the following figure, is located in the northwestern portion of the state along the Georgia border. Gadsden County is approximately 523 square miles in area. Gadsden County is predominantly a rural county. In 1970, the population of Gadsden County was 39,200 and in 1983 the population was 43,000. In 1990 the population of Gadsden County is projected to increase to approximately 44,500.

The largest employment sector in Gadsden County is Services, contributing about 45 percent of all jobs in the county, while Manufacturing contributes about 13 percent of all jobs in the county. Retail Trade contributes approximately 11 percent to total employment in the county. The Government and Agricultural sectors each contribute about 8 percent of total employment in the county. The remaining jobs are contributed by all other sectors in the county.

There are three active landfills in Gadsden County called the Quincy-Byrd Sanitary Landfill (Class I facility), the Chattahoochee Sanitary Landfill (Class II facility), and the East Gadsden County Sanitary Landfill (Class III facility). All of these facilities are publicly-owned and operated. The Quincy-Byrd facility began operating in 1975 and is reported to have six years remaining capacity. This facility is 120 acres in size and 15 acres are designated as disposal acreage. The Quincy-Byrd facility has a clay liner and five groundwater monitoring wells. The average cell depth is six feet and the depth to the water table is approximately 40 feet.

The Chattahoochee Sanitary Landfill began operating in 1966 and is reported to close within 12 months. This facility is ten acres in size, is unlined, and has one groundwater monitoring well. The average cell depth is eight feet and the depth to the water table at the site is six feet.

The East Gadsden County Sanitary Landfill began operating in 1979 and has approximately 15-20 remaining years of capacity. This facility is 20 acres in size and 13 acres are dedicated as disposal acreage. The facility is unlined and has three groundwater monitoring wells. The average cell depth at this facility is 25 feet and the depth to the water table at the site is 40 feet.

    2. = No

13. Cell Depth

14. Depth to Water Table (feet)

15. Soil Permeability (Inches/Hour)

16. Liner
    1. = None
    2. = Asphalt
    3. = Bentonite
    4. = Clay, Natural
    5. = Clay, Emplaced
    6. = Plastic
    7. = Other
    8. = Unknown

17. Number of Monitoring Wells

18. Number of Monitoring Points

19. Groundwater Monitoring Plan Approved
    1. = Yes
    2. = No

20. Adjacent Land Use
    1. = Agriculture
    2. = Commercial
    3. = Industrial
    4. = Residential
    5. = Vacant

21. Landfill Type
    1. = Trench
    2. = Area
    3. = Highrise
    4. = Burial in Borrow Pit
    5. = Wetland

APPENDIX E:

Gilchrist County

GILCHRIST COUNTY

Gilchrist County, shown in the following figure, is located in the northcentral portion of the state. Gilchrist County is approximately 350 square miles in area. It is predominantly a rural, agricultural county. In 1970, the population of Gilchrist County was 3,600 and in 1983 the population was 6,800. In 1990 the population of Gilchrist County is projected to increase to approximately 9,000.

The largest employment sector in Gilchrist County is Services, contributing about 34 percent of all jobs in the county, while Government contributes about 32 percent of all jobs in the county. The Retail Trade sector contributes approximately 12 percent to total employment. The remaining jobs are contributed by all other sectors in the county.

There is one active landfill in Gilchrist County called the Gilchrist County Landfill, a Class I facility. The Gilchrist County Landfill began operating in 1977. This facility is 20 acres in size, is unlined, and is publicly-owned and operated. The average cell depth at the facility is ten feet, and the depth to the water table is approximately 15 feet. Soil permeability at the site is approximately 3-4 inches per hour. There are five groundwater monitoring wells at the site, and there are 26 private water supply wells within one mile of the site.

APPENDIX F:

Glades County

GLADES COUNTY

Glades County, shown in the following figure, is located along the western shore of Lake Okeechobee in Southern Florida. The county is bounded to the west by Charlotte County, to the north by Highlands and Okeechobee counties, and to the south by Hendry County. The county has an area of 763 square miles and a population density of 8 persons per square mile. In 1970, the population of Glades County was 3,669 and in 1980 it was 5,992. The 1983 population was 6,389, and the 1990 population is projected to be 7,200.

The only incorporated town in Glades County is Moore Haven, which had a population of 1,189 in 1983. Glades County is one of the most rural counties in the state, and the largest percentage of the workforce (28 percent) is employed in the Agricultural sector. Twenty-four percent are employed in the Services sector, and 18 percent are employed in the Government sector.

There is only one active landfill in Glades County, the Class II Glades County Sanitary Landfill. At this site both the cell depth and the depth to the water table are 2 feet. The groundwater monitoring system is reported to be ineffective for detecting leachate migration. The site is scheduled for closure December 31, 1986.

APPENDIX G:

Gulf County

GULF COUNTY

Gulf County, shown in the following figure, is located in the northwestern portion of the state along the coast of the Gulf of Mexico. Gulf County is approximately 578 square miles in area. In 1970, the population of Gulf County was 10,100 and in 1983 the population was 11,000. In 1990 the population of Gulf County is projected to increase to approximately 11,300. Shipping and the manufacture of pulp and paper-related products are the main economic activities in Gulf County.

The largest employment sector in Gulf County is Manufacturing, contributing about 39 percent of all jobs in the county, while Services contributes about 21 percent of all jobs in the county. The Retail Trade and Transportation, Communication, and Public Utilities sectors each contribute about 12 percent of total employment in the county. The remaining jobs are contributed by all other sectors in the county.

There is one active landfill in Gulf County called the Buck Horn Sanitary Landfill, a Class I facility. The Buck Horn facility began operating in 1975, has approximately nine remaining years of capacity, and is publicly-owned and operated. The facility is 40 acres in size, unlined, and has four groundwater monitoring wells. The average cell depth is reported to be twelve feet, and the depth to the water table at the site is twenty feet. The soil permeability at the site is approximately 2 inches per hour.

APPENDIX H:

Hamilton County

HAMILTON COUNTY

Hamilton County, shown in the following figure, is located in the northcentral portion of the state along the Georgia border. Hamilton County is approximately 515 square miles in area. It is predominantly a rural county with most of the county acreage dedicated to commercial timber production. In 1970, the population of Hamilton County was 7,800 and in 1983 the population was 8,900. In 1990 the population of Hamilton County is projected to increase to approximately 9,800.

Data relating to commercial timber production employment is not readily available. In terms of reported employment data, the largest employment sector in Hamilton County is Services, contributing about 22 percent of all jobs in the county, while Retail Trade contributes about 9 percent of all jobs in the county. The Government sector contributes about 7 percent of total employment in the county. The remaining jobs are contributed by all other sectors in the county.

There are three active landfills in Hamilton County called the Hamilton County Sanitary Landfill (Class I facility), the West Hamilton County Sanitary Landfill (Class II facility), and the Jennings Trash Disposal Site (Class III facility). All three facilities are publicly owned and operated. The Hamilton County facility began operating in 1970, and is reported to have 19 years of remaining capacity. This facility is unlined, has four groundwater monitoring wells and one surface water monitoring point. The facility is 44 acres in size. The average cell depth is 8 feet and the depth to the water table is approximately 12 feet.

The West Hamilton Sanitary Landfill is one acre in size, began operating in 1981, and is reported to have four remaining years of capacity. The facility is unlined and has one groundwater monitoring well. The soils at the site are characterized as well drained. The average cell depth is eight feet and the depth to the water table is not included in the permit record.

The Jennings Trash Disposal Site is nine acres in size and began operating in 1970. This facility is designated for City government use only (i.e., compost site for yard trash only). The facility is unlined and has no groundwater monitoring wells. The depth to the water table at the site is approximately 50 feet.

APPENDIX I:

Hardee County

HARDEE COUNTY

Hardee County, shown in the following figure, is located inland form the Gulf coast and is bordered on the east by Highlands County, on the north by Polk County, on the west by Manatee County, and on the south by De Soto County. The county is approximately 637 square miles in area and has population density of 31 persons per square mile. Compared with other Florida counties, Hardee County has experienced little population growth. In 1970 the county's population was 14,889, and in 1980 it was 19,374, a 30 percent increase. The 1983 population was 19,784, and it is predicted that in 1990 the population of the county will be 21,500.

There are three small incorporated towns in Hardee County: Wauchula, with a 1983 population of 2,971; Bowling Green with a 1983 population of 2,305; and Zolfo Springs with a 1983 population of 1,592. The county is predominantly rural and the greatest percentage of the labor force (29 percent) is employed in the Agricultural sector. Twenty-seven percent of the labor force is employed in Services and 15 percent in Retail Trade. Employment in Manufacturing accounts for 5 percent of the labor force.

There is only one active landfill in Hardee County, the Class I Hardee County Regional Landfill, which began operation in January 1984 and has an expected life of 20 years. The depth to the water table at this site is an estimated 55 feet. The site, a combination trench/highrise operation with cell depths of 6 feet, is lined with both PVC liner and clay, and has a dewatering trench and a pump. An inspection in August 1985 revealed that the leachate collection system originally proposed in the 1982 permit application was never installed. The groundwater monitoring plan was received in July 1985 and was subsequently returned to the facility operator because it was not complete.

APPENDIX J:

Hendry County

HENDRY COUNTY

Hendry County, shown in the following figure, is located southwest of Lake Okeechobee and is bordered on the east by Palm Beach County, on the south by Collier County, on the west by Lee County, and on the north by Glades County. The county has a land area of 1,163 square miles and contains large portions of Big Cypress Swamp as well as the 69,900 acre Big Cypress Seminole Indian Reservation. In 1970 the population of the county was 11,859 and in 1980 it was 18,599, representing a 56.8 percent increase. The 1983 population was 20,694, and in 1990 it is projected that the population will be 25,700. There are two incorporated towns in Hendry County - - Clewiston with a population of 5,411 and LaBelle with a population of 2,460.

Hendry County is a rural county. Thirty-four percent of the workforce in this county is employed in Agriculture, twenty-one percent is employed in Services, and fourteen percent is employed in Retail Trade.

In Hendry County, there is one active land fill, the Hendry County Sanitary Landfill. The area method is used at this landfill. The depth to the water table at this site is between 1 and 4.5 feet. The FDER granted a permit to operate this landfill on top of an existing landfill, but the permit is only for vertical expansion of the existing landfill.

APPENDIX K:

Hernando County

HERNANDO COUNTY

Hernando County, shown in the following figure, is located in the westcentral portion of the state along the coast of the Gulf of Mexico. Hernando County is approximately 510 square miles in area. In 1970, the population of Hernando County was 17,000 and in 1983 the population was 56,700. In 1990 the population of Hernando County is projected to approach 100,000. A major industry in Hernando County is lime rock extraction. Lime rock is used as a raw material for the manufacture of cement and concrete.

Data on employment in the Mining sector is not readily available for Hernando County. In terms of reported data, the largest employment sector in Hernando County is Services, contributing about 29 percent of all jobs in the county, while Retail Trade contributes about 24 percent of all jobs in the county. Government contributes approximately 9 percent to total employment. The Construction and Manufacturing sectors each contribute about 8 percent of total employment in the county. The remaining jobs are contributed by all other sectors in the county.

There are two active landfills in Hernando County called the Croom Sanitary Landfill (Class I facility) and Ridge Manor Disposal Service Landfill (Class II facility). The Croom facility is publicly-owned and operated while the Ridge Manor facility is privately-owned and operated. The Croom facility is 46 acres in size and began operating in 1976. This facility has approximately two years of remaining capacity. The site is lined with a 6 mil. polyethylene liner and it has three groundwater monitoring wells. The average cell depth is reported to be four feet and the depth to the water table is about 70 feet.

The Ridge Manor facility is eight acres in size and it began operating in 1950. This facility is estimated to have four years of remaining capacity. The site has a clay liner and four groundwater monitoring wells. The average cell depth at the facility is reported to be six feet and the depth to the water table is also approximately six feet.

APPENDIX L:

Highlands County

HIGHLANDS COUNTY

Highlands County, shown in the following figure, is located in the center of Florida, northwest of Lake Okeechobee in the state's lake region. The county is approximately 1,029 square miles in area and has a population density of 52 persons per square mile. In 1970 the population of the county was 29,507 and in 1980 it was 47,526, reflecting a 61.1 percent increase. The 1983 population was 53,661, and in 1990 it is projected that the county will have a population of 67,513.

There are three small incorporated towns in Highlands County: Sebring with a 1983 population of 10,045; Avon Park with a 1983 population of 8,428; and Lake Placid with a 1983 population of 992. The largest percentage of the labor force in Highlands County (30 percent) is employed in the Services sector, followed by 21 percent in the Retail Trade sector, and 19 percent in Agriculture. Six percent of the labor force is employed in Manufacturing.

In Highlands County there are five active landfills, one of which is a Class I landfill and four of which are Class III landfills. The Class I facility is called the De Soto City Landfill and the Class III facilities are called the Avon Park Sanitary Landfill, the Sebring Trash Site, the Lake Placid Yard Trash Compost Site and the Avon Park Yard Trash Composite Site. The De Soto City Landfill was declared an open dump in 1981. Prior to 1982 this site was accepting asbestos and tannery wastes. Garbage is commonly disposed of at the Sebring Trash Site despite permit conditions that prohibit it. Only trash is accepted at the Avon Park Landfill. Putrescible wastes from the Avon Park Landfill are directed to an on-site transfer station for disposal at the De Soto City Landfill.
